

VITA GOLD skin gel

Next Generation Therapeutic Cosmetic

Innovative formula of Vita Gold skin gel is based on a complementary effect of **active oxygen** and **colloidal gold**. It provides oxygenation for the skin cells and activate their regeneration, relieving the symptoms of undesirable skin conditions.

The ultimate oxygenation of the skin

Vita Gold skin gel, with its active compounds fasten skin restoration, **slows down skin aging**, returns healthy & fresh look of the skin.

By creating a protective barrier on the skin and alleviating, preventing various skin problems and undesirable skin conditions, Vita Gold skin gel contributes to the healthy and beautiful skin.

VITA GOLD skin gel

Healthy & Beautiful Skin

Visible results

Suitable for all skin types

Vita Gold skin gel improves skin quality:

- Promotes faster skin restoration
- Slows down skin aging
- Acts as a mild antiseptic.
- Returns the healthy and fresh look.
- Regenerates

Complementary Effect of Special Compounds

Active Oxygen is a natural substance, vital to our body, which enters the cells and activates their oxygenation and regeneration from within.

Colloidal gold helps, with its anti-aging and antioxidant effect, restores normal properties of the skin, strengthening weakened and damaged skin.

Hyaluronic acid is a natural component of the skin with extremely high water-binding capacity.

Aloe Vera transfers active substances and in this way increases skin hydration and regeneration.

VITA GOLD skin gel

Effective Against Skin Conditions

VitaGold skin gel helps with:

- ✓ Impure and acne skin
- ✓ Sensitive and sore skin
- ✓ Rough and dry skin
- ✓ Faster skin restoration

Vita Gold Skin Gel makes a protective barrier on skin, relieving the symptoms of various skin diseases: Dermatitis, Rosacea, Psoriasis, Wounds, Eczema, Herpes, Acne, Warts and targets their main cause – a lack of oxygen.

How does it work?

Process of oxygenation is a mechanism of supplying the skin with oxygen in its active form. Upon contact with the skin surface, active oxygen is released in form of numerous tiny bubbles, which acts positively on skin condition. This contact triggers the chemical reaction between active oxygen compounds and metal ions in pathogen's membrane. This releases oxygen in form of oxygen singlet and water, this active form of oxygen then passes into human cells and activates oxygenation process within mitochondria along with the creation of ATP energy.
